

Peak System Performance and Reliability for Even the Tightest Budgets!

More than 90% of Fortune 500 companies use Diskeeper on their systems. Thousands of top IT professionals around the world consider Diskeeper absolutely vital to their network performance.

“Diskeeper is worth every penny and is one of the few programs out there that does exactly what it says. I could not be happier with the performance and reliability gains we have made since installing Diskeeper.”

*Patrick Emerick, Petrocard
IT Systems Specialist*

Diskeeper 2009 is real relief from tightening IT budgets, backlogged system support issues and the need for hardware upgrades. It is the one investment that pays for itself many times over in restored system performance, extended hardware life and reduced demands on IT staff. Diskeeper 2009 can give you better-than-new system performance across your network and it is invisible, completely automatic and far less expensive than trying to cope with the effects of fragmentation.

InvisiTasking® Technology: Enabling Real-Time Defrag with Zero Resource Conflicts

New Diskeeper 2009 is the only defragmenter with InvisiTasking technology, a breakthrough development that allows up-to-the-moment defragmentation without tapping into active system resources. As a result, systems maintain peak performance without the need for a schedule. You can extend your computer's useful life expectancy as much as 3 years. Because reliable computer performance is vital to a business, Diskeeper 2009 is a must have.

Diskeeper 2009 editions:

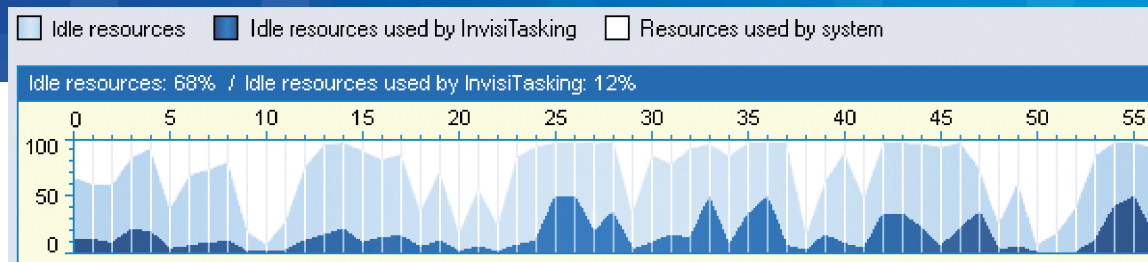

Diskeeper 2009 Professional provides essential performance management that all desktops and laptops demand.

Diskeeper 2009 Pro Premier is the ultimate edition for power users and high-powered workstation computing.

Diskeeper 2009 Server is streamlined from the ground up to focus on fast and efficient defragmentation of Windows® Server operating systems.

Diskeeper EnterpriseServer is the top of the line edition for the most vital server systems, providing fast defragmentation for high capacity, high traffic servers with millions of files. This edition delivers peak performance and reliability for mission-critical 24/7 servers.

Diskeeper 2008 Administrator provides complete centralized management of Diskeeper 2009 across your entire network.

InvisiTasking® technology enables the “impossible”: Fast defrag using only idle system resources.

Diskeeper 2009 Must-Have Features:

- **Real-time defragmentation** automatically handles fragmentation as it occurs, providing maximum system performance at all times. Back up times are significantly reduced as are boot times. Scheduling defrag becomes unnecessary. Fragmentation-based system errors vanish. The system runs at peak performance regardless of how vigorously the disk is being written to.
- **InvisiTasking technology** is a transparent, background processing technology that allows Diskeeper 2009 to defragment your system in real-time, completely eliminating the need for cumbersome maintenance operations.
- **NEW! Titan Defrag Engine™** technology is the most powerful defrag engine ever built, eclipsing even the previous technology leader—the Terabyte Volume Engine™ (TVE). Titan was specially developed for the most massive data volumes ever created. It will complete the job even faster and more thorough than TVE. Starting at 100 GB, it easily defrags volumes up to 20+ TB. Available in EnterpriseServer edition.
- **NEW! Terabyte Volume Engine** is now available in Diskeeper Pro Premier and Server editions. It is a powerful defrag engine capable of eliminating the rapid fragmentation build-up that occurs in high-traffic volumes that handles millions of files. The greater the number of files and fragments on a volume, the more dramatic TVE's benefits will be.
- **NEW! Free Space Defragmentation Engine** rapidly consolidates the system free space into less than a dozen large free space segments, improving the file write performance by minimizing the likelihood of new file writes being written in a fragmented state.
- **NEW! I-FAAST® 2.0** (Intelligent File Access Acceleration Sequencing Technology) accelerates file access times to meet the heavy workloads of file-intensive applications. It closely monitors file usage and organizes the most commonly accessed files for the fastest possible access. Now also available in Professional edition.
- **NEW! IPv6 Support** (Internet Protocol version 6) for communication, such as remote management on native IPv6 networks.
- **NEW! Support for MOM/SCOM** (Microsoft® Operations Manager/ System Center Operations Manager) allows monitoring and management of network computers that use the Diskeeper management pack (provided with Administrator) to manage alerts, create reports and manage and control product settings and configurations.
- **NEW! Automatic Online Directory Consolidation** boosts antivirus scans and back-up speed.
- **NEW! Automatic Defrag Management** provides the ability to automate a network defragmentation policy. As systems on a network are added and removed, Diskeeper Administrator can be set up to dynamically deploy installations to those new computers and configure settings with predefined policies. Systems removed will also be detected and the software licenses assigned to them will be re-captured and returned to the available license pool. Available in Diskeeper Administrator edition.
- **Volume Shadow Copy Service (VSS) Compatibility mode** affords you the ability to leverage the data protection of VSS and the performance and reliability of automatic defragmentation.
- **“Defragmentation Intelligence”** logic controller detects various volume and system conditions and chooses the most effective algorithm for the job.
- **Complete file and free space defragmentation** in the most extreme conditions. Even if your systems have less than one percent free space left or files in millions of fragments, Diskeeper 2009 can defrag them, restoring lost performance and saving applications that rely on those files from hangs and freeze-ups.
- **Boot-Time Mode** safely performs Microsoft-recommended defragmentation of critical system files.
- **Native 64 bit** operating systems support.
- **The Dashboard** is an easy-to-use console, displaying real-time details about automatic defrag, the health of your volumes, as well as idle resources being used to accelerate volume performance.
