ENTERPRISE SECURITY REPORTER™

What's New in Enterprise Security Reporter 3.6?

Enterprise Security Reporting Made Easy

Enterprise Security Reporter is an agent-less, fast, comprehensive discovery and reporting solution for analyzing file security, group memberships and other security settings on Windows file servers, Active Directory servers, and SharePoint servers.

Enterprise Security Reporter retrieves and stores data on NTFS permissions, local account databases, user accounts, group memberships, Active Directory, SharePoint servers, and security settings on other resources such as printers and file shares. It then provides the administrator with tools to compare, analyze, query and report on the security and configuration of the network. **Enterprise Security Reporter** includes numerous ready-made and customizable reports, with output in eight popular file formats.

New Feature Highlights for Version 3.6

NEW! Report on Microsoft SQL Server Security

New to Enterprise Security Reporter 3.6 is the ability to discover and report on Microsoft SQL Server security. With so much valuable data typically stored in your SQL Server databases, including customer contact data, transaction data, and accounting data; analyzing this security is crucial. Enterprise Security Reporter 3.6 makes this mission-critical task easy with a number of ready-made SQL Server security reports.

- Discover, analyze and report on database object and schema security, server logins, database users and role membership with thirteen pre-designed, customizable reports.

- Support for all Microsoft SQL Server 2000 and 2005 versions, including MSDE and SQL 2005 Express.
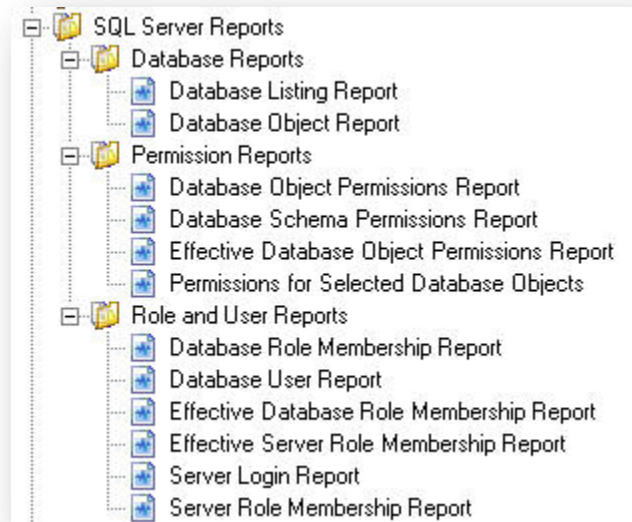

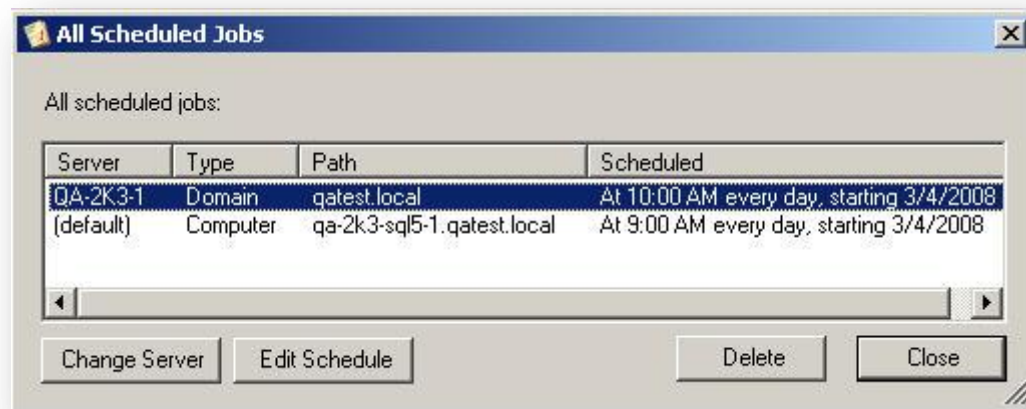

- Determine the effective SQL permissions for accounts based on their Windows group and SQL database role memberships.

NEW! Consolidated View of Scheduled Jobs

- View and manage all scheduled discovery jobs in one location. Change discovery servers, edit schedules and delete jobs without relying on Windows Task Scheduler.

ENHANCED! Schedule and Export Queries to Generate New Custom Reports

- Query Builder utility has been enhanced to allow your custom queries to be scheduled. Results can then be exported in XML or CSV format and distributed to email recipients.

- Saved queries can now be used to create new custom reports. Query data such as sort order and criteria is imported directly into the Report Composer making custom report creation easier than ever!
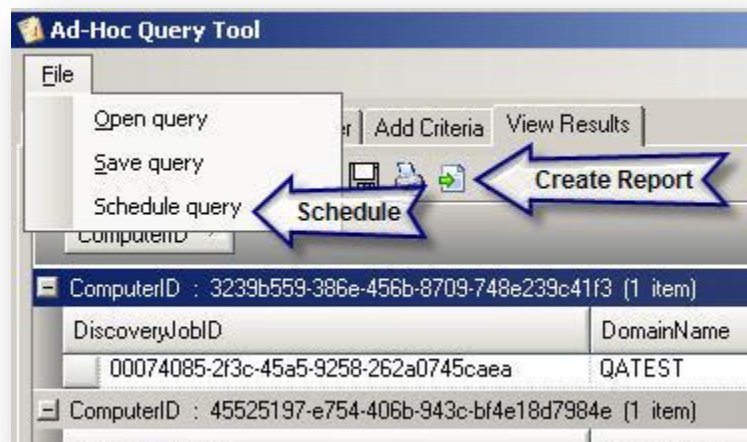

IMPROVED! Many More Customer Requested Enhancements

Enterprise Security Reporter 3.6 has a number of usability and functional enhancements including:

- **Email reports directly from preview window -** Prior versions required reports be scheduled in order to email the report results. Enterprise Security Reporter 3.6 adds this functionality directly to the report preview window allowing you to email reports on the fly.

- **Intelligent Upgrade Utility -** New feature that checks the database version against the version of the software installed and automatically upgrades the database if necessary. Prevents the need to reinstall the software if the database does not get upgraded properly at the time of the install.

- **Added ability to filter account data by organizational unit -** Updates to the database now allow reports that display domain account information to be filtered by the account's organizational unit.

- **Support for Windows Server 2008 -** Added support for installation of the product on Windows Server 2008. Also added support for Windows Server 2008 as a discovery target machine.

Summary

Enterprise Security Reporter 3.6 provides a feature-packed release with support for discovering and reporting on the security of your SQL Servers. Adding this new functionality to the existing support for reporting on your Windows file servers, Active Directory servers, and SharePoint servers; Enterprise Security Reporter 3.6 will enable administrators to meet their compliance and auditing needs more effectively than ever!

In conjunction with File System Auditor and Security Explorer, Enterprise Security Reporter 3.6 provides a complete solution for bringing a file server into compliance. Ask your reseller or ScriptLogic representative about our File Server Compliance Solution, which combines all three products at a significant discount.
